

Shell to Sea

... is the name given to a campaign against Shell and the Irish government and their plans to build an onshore High Pressure Pipeline and Gas Refinery in Erris, Co Mayo, Ireland.

◆ We want ...

- ◆ Shell to build the refinery at sea, for Environmental and Health & Safety reasons.
- ◆ The government to ensure that the people of Ireland benefit from the euro-billions of oil and gas that lie off our shores - our natural resources that were all given away to the multinational oil and gas companies by corrupt politicians like Ray Burke and his kind.

There is No Community Consent for this project.

The Irish Government has not engaged, but has turned on its own people

In a Brutal show of State Force & Violence ... for Shell.

"Shell to Sea is an international non-violent campaign, rooted in the Erris community. We seek to ensure the proposed Corrib gas terminal & pipeline are constructed offshore, as is best practice...we seek to highlight the negligent environmental, health, safety, planning & economic consequences of this government-backed plan....We have been campaigning for several years and continue to face intimidation, slander & significant hardship as a result.... We will remain peaceful, committed & determined in the coming days, weeks, months ..."

The Great Gas Giveaway.

"No other country in the world has given the oil companies such favourable terms." *Mike Cunningham, ex-Statoil Director*

The Great Gas Giveaway.

"No other country in the world has given the oil companies such favourable terms." *Mike Cunningham, ex-Statoil Director*

A **Development** is defined as **Sustainable** if it satisfies the **needs** of the **3 Pillars of Sustainability** which are:

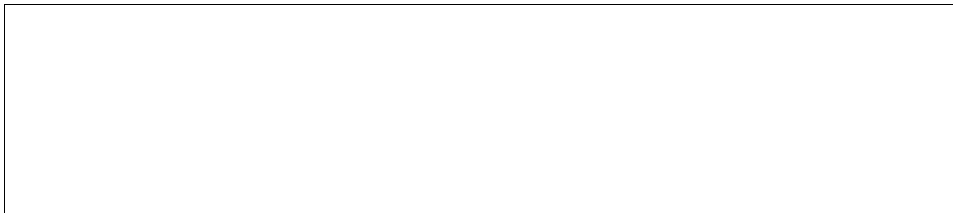

- ◆ **The Social & Cultural**
- ◆ **The Environmental**
- ◆ **The Economic**

In response to Shell's first Planning Application (before political interference ensured subsequent approval), a Senior Planning Inspector, Mr Kevin Moore damned the project in a comprehensive report and concluded that from the perspective of the planning and sustainable development of the area, it is the '**Wrong Project in the Wrong Place**'.

Now, before the project is even up and running, with a refinery only half-built, no pipeline and no production, we have:

- ◆ Social Division & A Community in Crisis, brutalised, bullied and ignored by the State for 10 years now. No Consent.
- ◆ Environmental Destruction & Pollution, the killing of local wildlife, and the ongoing aluminium contamination by Shell of the local drinking water supply, Carrowmore lake, facilitated by Mayo County Council, the National Parks & Wildlife Services, and the Environmental Protection Agency.
- ◆ The giveaway of our natural gas resource into the sole ownership of the Shell Corrib Gas Partners with no economic benefit for the people of Ireland.
